Hydrology and Water Use for Salmon Streams in the Middle Fraser Habitat Management Area, British Columbia

REVISED TABLES

The values for Logged Area were in the wrong columns for the original tables.

Table 7. Hydrology of the Salmon Streams in the Middle Fraser HMA

Replace table 7. on pages 49 and 50 with the attached tables.

Table 7: Hydrology of the Salmon Streams in the Middle Fraser HMA.

- Gauge numbers in Column 2 indicate that flow characteristics were calculated from those Water Survey of Canada records.
 - Logged areas determined as described in Section 4 of the report.
 - Total water licences for each salmon stream expressed in imperial units, as provided by Water Management Branch.
 - Reference for all data in table is the mouth of the salmon stream.
 - Licensed demands (L/s) calculated from total water licences as described in Section 5 of the report.
 - Naturalized flows are estimates of those that would occur in the absence of all upstream water extractions.
